A woman with long, wavy red hair, wearing a light blue, tiered, long-sleeved dress, stands at a fork in a dirt path in a lush, green forest. She is looking towards the right path with a slightly confused or uncertain expression. The forest is dense with tall trees and various green plants and ferns. The lighting is soft, suggesting an overcast day or a shaded forest.

**One day Alice came  
to a fork in the road**

**Statistics**

**AI**

**Statistics**

**AI**

**Cat: where do you want to go?**

**Statistics**

**AI**

**Cat: where do you want to go?**

**Alice: to paradise for analysts.**

**Cat: where do you want to go?**

**Alice: to paradise for analysts.  
do both paths go there?**

**Cat: where do you want to go?**

**Alice: to paradise for analysts.  
do both paths go there?  
how do they differ?**

# What is paradise (for a task)?

---

- Automation
- Discrimination
- Calibration + calibrated scores
- Statistical validity

# Do Statistics and AI paths both go to paradise?

## Statistics:

- Needs more analysis of data/model
- More health focus
- Needs less data

## AI:

- Better than stats for very complex problems
- More mindshare
- Needs more data

# Do Statistics and AI paths both go to paradise?

## Statistics:

- Needs more analysis of data/model
- More health focus
- Needs less data (model driven) global model
- Usually easier to explain, inspect

## AI:

- Better than stats for very complex problems
- More mindshare
- Needs more data (data driven) local model
- More effort, expertise to explain, inspect

# Data in machine learning

---

- Structured **or unstructured** data
- Big or small data
- Thin **and wide**
- Static, longitudinal, **or online as an incoming stream**
- Feature collinearity **okay / better tolerated**
- Feature parsimony **not needed: thousands allowed**
- Calibration (goodness-of-fit) **often neglected**

# Learning in biostatistics

---

Hidden  
slide

- Maximizes likelihood
- Calibration (goodness-of-fit) important
- Converted to a single data type
- A few mixed data methods
- Can explicitly include noise & error variables (uncertainty)
- Exceptions: LASSO, Ridge

The Ottawa  
Hospital

# Learning in machine learning

---

Hidden  
slide

- Maximizes **posterior probability** and may
  - **Maximize margin**
  - **Control complexity with sparsity & shrinkage**
- Goodness of fit and p-values **often ignored**
- A few more mixed data methods
- Sometimes bio-inspired

# Pitfalls and challenges

---

- Collaboration assumptions: e.g., terms, methods
- Non-bias/cost assumptions: e.g., AUC relevance
- Data assumptions: e.g., PCA - linear
- Expert cameras and bake-offs: e.g., linear SVM
- Being unFAIR: e.g., re-usable open science

# Foundational skills

---

to understand and do AI/ML well, are:

- algebra (advanced)
- statistics (advanced)
- ML methods (advanced) and pipelines
- programming, databases, data wrangling
- subject matter concepts, processes, data
- explainable and equitable AI
- some probability, info theory, calculus, optimization
